TITLE : HEAD OF GOLF CLUB

ABSTRACT : PROBLEM TO BE SOLVED: To provide the head of a golf club capable of improving the carry of a ball.

SOLUTION: The position corresponding to the sweet spot at the rear surface of a metallic face 12 is formed as an intersection point and a radial thick part 20 extending in the circumferential edge direction of the face 12 is formed. When the ball is hit by the face 12 of the head 10, the repulsive force of the face 12 is improved by the thick part formed at the rear surface. The ball is repulsed by this repulsive force and its carry is tremendously increased.
